Profile

Computer science student interested in AI systems, retrieval-augmented generation (RAG), and memory-based agents. Experienced in building LLM applications, multi-agent workflows, and graph-based reasoning systems.

Education

Cochin University of Science and Technology (CUSAT) Kochi, India

Five Year Integrated M.Sc in Computer Science 2023–2028
(Artificial Intelligence and Data Science) GPA: 7.4

Experience

AI Intern, Lealabs Pvt. Ltd. May 2025 – July 2025

- Built RAG pipelines for PDF QA using Python, LangChain, Gemini API, and ChromaDB.
- Developed document processing workflows (extraction, chunking, embeddings, vector indexing, semantic retrieval).
- Designed multi-agent workflows for document analysis, summarization, and knowledge retrieval.
- Built modular backend services with API integration and Git-based workflows.

Selected Projects

TKG Agent – Temporal Knowledge Graph Based Agent PROJECT-LINK

- Built Temporal Knowledge Graph memory using Neo4j for smart-home agents; transformed simulator observations into semantic temporal facts.
- Integrated retrieval-grounded reasoning into a ReAct agent inside SimuHome; developed graph visualization tools.
- **Technologies:** Python, Neo4j, LangChain, LLM APIs, SimuHome

Agro Sentinel — AI-Based Crop Damage Assessment

- Built a crop damage assessment pipeline and Flutter application for the Jain University and IBM co-sponsored National Hackathon: Tech for Agriculture 2026 (Ranked 6th among 540+ teams).
- Trained lightweight models and exported them to TensorFlow Lite for offline mobile inference; integrated Firebase services and satellite-image analysis workflows.
- **Technologies:** Flutter, TensorFlow Lite, Firebase, Python

Smart Math Tutor — Multi-Agent Mathematical Reasoning

- Built AutoGen/LangChain multi-agent system with Problem Solver and Verifier agents using SymPy for symbolic computation.
- Combined LLM reasoning with deterministic verification to improve response reliability.
- **Technologies:** Python, AutoGen, LangChain, SymPy

Camp Rider — Campus Ride Sharing Platform

- Full-stack ride-sharing platform on AWS (EC2, S3, Lambda, CloudFront) with Node.js and MongoDB.
- Built authentication, ride management, and communication services.
- **Technologies:** Node.js, MongoDB, AWS, React

Areas of Interest

Agentic AI Systems | Temporal Knowledge Graphs | Retrieval-Augmented Generation (RAG) | Memory-Augmented LLM Agents | Interactive AI

Skills

Languages: Python, C++, Java, C, Dart

AI/ML: PyTorch, TensorFlow, Hugging Face, LangChain, AutoGen, RAG, LLM APIs

Databases: Neo4j, ChromaDB, MongoDB

Backend: Django, Node.js, REST APIs, React

Cloud/Tools: AWS (EC2, Lambda, S3, CloudFront), Firebase, Git, Pandas, SymPy, OpenMP
